Penetration Testing Silver Plan FAQ's

What is a "Firewall Vulnerability Port Penetration Test with Pass or Fail Certificate?"

In this test we remote into your office on a workstation and perform a non-destructive attack on the firewall's most common access points (also called ports). The results are presented online with an immediate pass or fail reports. We explain the results verbally and discuss suggestions as appropriate.

What is "External Email Domain, Non-Destructive Diagnostic Attack"?

Depending on your email system we probe the email domain, which is exposed on the Internet by necessity. We retrieve the publicly accessible configuration and determine the vulnerabilities and potential exploits of your email system. This simulates the initial levels that a hacker might perform to begin to penetrating your email. We discuss the results and if appropriate provide suggestions

What is "10 Cyber Security Awareness Facts"?

This is a document of current cyber-security, physical security, malware and IT privacy basic information to help staff and management understand and protect themselves from computer risk.
